

Our Mission

Our mission is to provide a holistic solution to a variety of interrelated issues within the healthcare industry that have plagued both patients and providers for decades, and to upscale the industry to current standards in the age of connectivity.

Our BioPassport platform addresses three major shortcomings in existing healthcare infrastructure:

Poor distribution systems or lack thereof for health kits

Need for better medical data management and distribution

Need for a universal personal healthcare record

BioPassport is committed to help make healthcare a personal component of our daily lives. This starts with a "health passport" platform that houses a patient's DPHR, or decentralized personal health record built around DID (decentralized identity) technology.

Here's how easy it is to use:

WHAT IS THE DPHR?

The DPHR is a health record platform that will safely allow both users and hospitals to submit medical data, allowing users to have full access to their medical information whenever and wherever they need it.

The BioPassport ecosystem consists of three major components for a holistic solution, ready by 2022:

DHPR (Decentralized Public Health Record)

BioPassport DPHR Marketplace

Telehealth Service

Token Details & Distribution

Token Offering

BioPassport is offering a token sale to invite the community's support. You can directly be a part of historical innovation in medical technology by participating in the token sale.
